

# Argos

## **ARGOS:** Ad-hoc Report Generation and Output Solution by EVISIONS

As the official reporting tool for the College community , ARGOS provides a web-based solution for most of our data processing needs.

### **How do I get to ARGOS?**

Follow this URL: <http://maps.rollins.edu>. Click on the Argos bar and then on the Argos button. If you do not get a login page, you may be required to download Java. Here's the link to the Java download version we recommend (this is the most recent version and the most secure): [http://www.java.com /en/](http://www.java.com/en/) Follow the prompts and allow the install. Close your browser and reopen it to <http://maps.rollins.edu>. Click on the Argos button again and you should receive a login prompt.

## **ARGOS Getting Started Guide**

### **Compatibility**

Argos can be accessed only on pc machines at this time, but can be accessed from most browsers.

### **How do I log in?**

Use your Outlook username & password combo. If that doesn't work, it could be that you need an ARGOS account. Please put in an RFS to acquire an account. <http://webhd.rollins.edu:8081>

**How do I make a request for training, new reports, report adjustments, or other support?**

Please contact [chamblin@rollins.edu](mailto:chamblin@rollins.edu) (x6369) for ARGOS support.
